PROFESSIONAL SUMMARY

AI Engineer experienced in building **production-grade LLM systems, RAG pipelines, and AI-powered workflows**. Strong track record of shipping end-to-end AI products and improving system **accuracy, latency, and efficiency**. Focused on translating complex AI capabilities into **scalable, real-world applications**.

TECHNICAL SKILLS

Languages & Core CS: Python, JavaScript, TypeScript, SQL; Data Structures & Algorithms (DSA)

AI/ML: LLMs, RAG, NLP, Prompt Engineering, Embeddings

Frameworks/Tools: LangChain, FastAPI, HuggingFace, Node.js, Next.js

Systems: API Integration, Workflow Automation, AI Agents (LLM pipelines)

Databases: MongoDB, SQL, VectorDB, Pinecone

Cloud/DevOps: Docker, Kubernetes, GCP, AWS

EXPERIENCE

Adaptive AI Ventures

Oct 2025 – Present

Team Lead – Software Engineering

- Led development of **production-grade AI systems and LLM-powered workflows**, improving delivery efficiency and system reliability by driving end-to-end ownership from architecture to deployment
- Improved system reliability and delivery speed by implementing structured design reviews and scalable engineering practices, **reducing production issues and iteration cycles**
- Increased team productivity and output quality by mentoring engineers on **LLM development, RAG pipelines, and prompt engineering** and establishing best practices
- Delivered multiple AI features within tight timelines by **coordinating across product and engineering teams**, enabling faster iteration and feature rollout

Adaptive AI Ventures

Dec 2023 – Oct 2025

AI Engineer

- Built and deployed **RAG pipelines using OpenAI, Google Gemini, Llama2, and Mistral**, improving response accuracy by **30%**
- Reduced manual processing time by **95%** by developing **LLM-powered document intelligence workflows**
- Improved operational efficiency by **70%** through automation of data extraction and processing pipelines
- Designed end-to-end **AI systems integrating data ingestion, retrieval, LLM processing, and output validation**
- Implemented evaluation frameworks tracking **accuracy, latency, and reliability**
- Deployed scalable AI services using **Docker, Kubernetes, and GCP/AWS**

PROJECTS

ResumePros AI — Product Engineer

- Built and shipped a **production AI product** for resume optimization using LLMs and structured scoring systems
- Designed **LLM-powered workflows for extraction, analysis, and content generation**
- Improved output consistency by implementing deterministic evaluation alongside LLM outputs
- Developed full-stack architecture using **Next.js, Node.js, MongoDB, OpenAI APIs**
- Drove **end-to-end product lifecycle** from ideation to production, enabling rapid iteration and continuous improvement through user feedback and data-driven decisions

Document Understanding AI Pipeline

- Built an end-to-end **RAG-based document processing system** using OCR, embeddings, and LLMs
- Improved system performance by optimizing **accuracy and latency metrics**

Product Analytics Dashboard

- **Reduced manual KPI tracking** and improved product decision-making by building a **Python - Streamlit analytics dashboard** consolidating 8+ SaaS metrics with funnel, cohort, and real-time monitoring workflows

EDUCATION

Master of Computer Applications (MCA) Government College of Engineering, Aurangabad CGPA: 9.0	2022 – 2024
Bachelor of Science (Computer Science) Maulana Azad College, Aurangabad	2019 – 2022

CERTIFICATIONS

Generative AI Leader Specialization — Google Cloud Focus: GenAI systems, AI agents, LLM landscape, enterprise AI workflows	Apr 2026
Google Prompting Essentials — Google Focus: Advanced prompting techniques, LLM task optimization, structured prompt design	Mar 2026
Automation Business Analysis – Concepts and Principles — UiPath Focus: Process analysis, automation design, stakeholder-driven system development	Jan 2025
